Petar Danadzhiev

Software Developer — Salesforce, JavaScript, Java, C++

Full name Petar Stanislavov Danadzhiev

Email petar.danadzhiev.bg@gmail.com

Date of birth 27/11/2002

Driving license Yes - B2

Availability Open to new opportunities

GitHub https://github.com/EarlyBitcoiner

Trailblazer https://www.salesforce.com/trailblazer/h5vr0rx2pownuyerif

Nationality Bulgarian

Phone +359 878 559 407

Location Bulgaria

IT work experience 3.5 Years

Focus Mainly Salesforce but open to other technologies

LinkedIn https://www.linkedin.com/in/петър-данаджиев/

SUMMARY

Software Developer with 3+ years of experience building scalable solutions. Skilled in Object-Oriented Programming (Java, C++, Apex), Modern JavaScript (ES6+, Web Components), and complex REST/SOAP API integrations. Experienced in full SDLC, design patterns, and automating business processes. Committed to writing efficient, clean code and continuously expanding my stack with technologies like Node.js.

CERTIFICATIONS

Salesforce Platform Developer II

Aug 2026

Salesforce Certified

Trailblazer Account - https://www.salesforce.com/trailblazer/h5vr0rx2pownuyerif

Tags: Certification, Qualification

Salesforce Platform Developer I

Feb 2025

Salesforce Certified

Trailblazer Account - https://www.salesforce.com/trailblazer/h5vr0rx2pownuyerif

Tags: Certification, Qualification

SKILLS

Spoken Languages

Bulgarian, English

Programming Languages

Apex, JavaScript, C++, HTML & CSS, Java

Tools & Cloud

Git, GitHub, Copado, Claude Code, Gemini, VSCode, IntelliJ Webstorm, Salesforce CLI, Sales Cloud, Service Cloud, Revenue Cloud/CPQ package, Jira, Teams, Slack, MS Word

EXPERIENCE

Salesforce Developer, SoftServe
Jun 2025 — Oct 2026

Remote

In SoftServe I was working in a project for a payment provider based in England, there I contribute to improving/customizing the quoting process for the company's clients where I leverage my knowledge in LWC, Salesforce CPQ, Apex, Flows and OmniScripts to create better UI experience and automations.

Some of my time in SoftServe I was in a standby period awaiting client allocation. Instead of remaining passive, I proactively utilized the time to bridge the gap between Salesforce and core software engineering. I focused on Design Patterns, OAuth, and deep understanding of Java/OOP principles to ensure I can build architecturally sound solutions, regardless of the platform.

- Learned OOP design patterns.
- Customized Salesforce CPQ quoting process for clients leveraging LWC, Apex, Flows and OmniScripts.
- Was part of a 30+ team of Salesforce developers and engineers, collaborating and sharing knowledge.

Technologies: Salesforce, CPQ, Copado, Apex, JavaScript/LWC, OmniScripts, Flows, Design Patterns, VisualForce

> **Reference:** Roman Slobodian — Team Lead, SoftServe · rslob@softserveinc.com · Phone number can be provided upon request · LinkedIn

Salesforce Developer, Next Consult
Jun 2023 — Jun 2025

Remote

Engineered responsive and efficient user interfaces using Lightning Web Components (LWC) and Aura tailored to the customer needs.

Developed scalable Apex solutions, including triggers, batch classes, and schedulable jobs, to automate complex data processing.

Developed and maintained REST and SOAP integrations between Salesforce and external systems, ensuring seamless data synchronization and integrity.

Exposed Apex classes as secure web services, enabling real time data access for external applications.

Built and enhanced legacy Visualforce pages (mainly ones generating PDF files) with custom Apex controllers to support critical business functions dependent on PDF files like contracts.

- Built Salesforce SOAP Integration with Experian Bank Services provider.
- Built Salesforce REST Integration with Romanian Government ANAF system for uploading client Invoices.
- Built Node JS server on Heroku to be used as Custom Activity in Salesforce Marketing Cloud.
- Built countless Apex classes, triggers, flows, LWCs and sObjects.

Technologies: SOAP, REST, Salesforce, Apex, LWC, Aura, VisualForce, Flows, CPQ, Heroku, Node.js

Construction Worker, Sportjanne LTD.
May 2022 — Jun 2022

On-site — Germany

https://sportjanne.com/

My job was building warehouses for Karcher with focus on:

- Assembling little parts of the warehouse on the ground.
- Transporting work equipment.
- Supervising other workers.

PROJECTS

Romanian E-Invoice Salesforce REST Integration — 4 months

Role: Salesforce Developer · **Team size:** 1 Developer , 1 Administrator

An Enterprise client operating in Romania wanted integration with the Romanian Government E-Invoice service to automatically send XML invoices from their Salesforce org at the end of the day to the client's government account to achieve easier accounting. Before the integration their workflow was manual and time-consuming, requiring the client to log in to the government portal and manually upload the XML invoices. The integration was built using Salesforce Apex and REST API to send the XML invoices directly from Salesforce to the government service, streamlining the process and saving time for the client.

- Collecting and analyzing the E-Invoice API documentation. Creating a plan and separating it into many tickets.
- Developing Apex classes to make the API calls to the E-Invoice service and handle the responses.
- Developing the backend logic to handle the XML invoice generation and submission.
- Developing a ZIP file parser to handle the API responses from the E-Invoice service.
- Creating custom fields on the Invoice object to store the E-Invoice service responses and status.

Tools & technologies: Salesforce, Apex, Schedulable Apex, Queueable Apex, REST API, Custom Metadata Types, CPQ, Git, GitHub, GearSet DevOps

AgentForce Custom Sales Support Employee Agent — 3 months

Role: Salesforce Developer · **Team size:** 4 Developers

Client wanted AI integrated into their Salesforce org to help their sales team in their daily work. The aim was for AI to execute sales tasks by simple prompting in plain everyday English. AI agent was created working in the user context for search operations on accounts, opportunities, quotes and products. The AI agent was able to do the following operations based on user prompt:

1. Search for accounts, opportunities and quotes.
2. Search for products and create quotes with the products found and selected in the prompt.
3. Check for pending approvals and approve or reject them.

None of these operations required any coding knowledge from the user, they were all executed by simple prompting in plain everyday English and no operation was executed without the user explicitly prompting for it, for example the AI agent would never approve or reject an approval without the user explicitly prompting for it, nor creating opportunities or quotes. The AI always executed the operations in the user context as if the user was executing them themselves, so the AI agent never had any elevated permissions and could only do what the user could do.

In the end we achieved AI agent which helps sales team do their work faster and more efficiently.

- Writing AI agent usable Apex invocable methods.
- Writing instructions for the agent on how to handle user interactions, setting boundaries on behavior and ethics.
- Writing AI agent instructions for each operation such as creating a quote. These instructions were for one of the following:
  - When the operation should be executed.
  - What data should be collected from the user before executing the operation and how to ask for the data.
  - How should the response data be formatted and presented to the user.
  - What should be done if the operation fails or if the user input is invalid.
  - What other operations should be executed before or after the operation.
- Taking active part in testing and designing the AI agent.

Tools & technologies: Salesforce, Agentforce, AI Agents, Apex, Revenue Cloud, Lucidchart, Git, GitHub, GearSet DevOps

Shipment management UI component

4 months

Role: Salesforce Developer · **Team size:** 2 Developers , 2 Administrators

Client had their shipment and warehouse management processes handled internally in Salesforce. They wanted to improve their order fulfillment process by creating more user-friendly, intuitive and efficient process. It was decided custom LWC components and custom Apex processes had to be built.

Their old process for order fulfillment was very clumsy and slow, requiring many clicks and page reloads. The process was - warehouse employee receives notification about order, they open the order and check every single product in the order, then they check the stock for each product and if the stock is available they create a shipment for the product, if not they create a backorder for the product. After all products are checked and shipment/backorder created, they have to go to the shipment object and check if all shipments are created and if yes, they have to click a button to mark the order as ready to be shipped.

The new process was designed to be more user-friendly and efficient. The warehouse employee receives notification about order, and through the notification they open our custom LWC component having everything in place like products in the order, availability of the products, tracking of which products are already added to the order shipment and which are not, and a button to mark the order as ready to be shipped, which automatically start the shipment process for the other employees.

- Developing Apex classes to handle all the backend logic behind the scenes.
- Developing custom LWC for phone usability.
- Closely collaborating with the administrator to understand the business process, all sobjects around it and design the new process.

Tools & technologies: CPQ, Salesforce, Apex, LWC, Flows, Git, GitHub, GearSet DevOps

Experian API SOAP Integration for Salesforce

1 month

Role: Salesforce Developer · **Team size:** 2 Developers

Client needed the Experian Bank Wizard SOAP API integrated with Salesforce to be able to do bank verification on its users. In this project I was playing a support role to a more senior developer, helping him with integrating the API endpoints and testing the integration.

This was my first time touching SOAP based APIs, it was short but really valuable project for me because here I learned to work with XML files, how to create Apex XML parsers and how to do SOAP integrations.

- Helping with the integration of the Experian SOAP API endpoints into Salesforce.
- Helping in creating Salesforce sObject to XML file parser.
- Helping with testing the integration and making sure it works as expected.
- Mapping sObject fields to XML structures.

Tools & technologies: Postman, Apex, SOAP UI, SOAP, Git, GitHub, GearSet DevOps

Customizations Maintenance and Enhancement 7 months

Role: Salesforce Developer · **Team size:** +30 Salesforce professionals (Developers, Administrators, QAs, PMs, CPQ Specialists, Salesforce Architects)

Enterprise Client, part of a huge and serious team developing and maintaining many different things simultaneously. I did a lot of enhancements for Revenue Cloud/CPQ processes like Flows, Apex Classes, LWCs, Visualforce pages and something completely new for me at the time OmniScripts and Omni Flex Cards which was basically LWCs framework. Here I got valuable experience in Copado DevOps operations.

- Enhancing already working Flows, LWCs, Apex classes and OmniScript to cover new client requirements and new desired look.
- Aligning old customizations in work without problem with newly released ones.
- Updating and maintaining documentation on changes I have done on customizations.
- Doing code reviews.
- Actively participating in discussions by giving my technical point of view opinion.

Tools & technologies: Flows, Apex, OmniScripts, Omni Flex Cards, Sales Cloud, CPQ/Revenue Cloud, Copado, Jira, Git, GitHub, Lucidchart, Slack

COURSES & TRAINING

NodeJS Internals & Architecture, **Udemy · Hussein Nasser** Aug 2026 - Sept 2026

In this course I gained deep insight into the internals of NodeJS - Libuv, V8, Event Loop Phases, Threads, Processes, OS communication, I/O operations.

- Event Loop Mechanics: Reviewed and learned the internal phases of the Node.js Event Loop (Initial, Timers, Pending, Poll, Check, Close) and microtask queues (process.nextTick, Promises). I saw examples and analyzed how blocking the main thread causes callback starvation and dropped server requests.
- Asynchronous I/O & Libuv: Gained insight into Libuv. Differentiated between non-blocking operations delegated directly to the OS (network I/O) and operations offloaded to the Libuv thread pool (File System, DNS lookups).
- Worker Threads: Learned how to spot CPU intensive operations and how to use the worker threads module in order to offload CPU intensive operations to another thread and prevent blocking of the main one.
- Process Management: Evaluated the architectural tradeoffs between scaling Child Processes (memory isolation, IPC) and Worker Threads (shared memory) for high-performance backend applications.

Topics: Node.js, Asynchronous, Event Loop, Worker Threads, Libuv, V8, OS Communication, I/O Operations

OOP Design Patterns, **Udemy · Jason Fedin** **Nov 2025 - Dec 2025**

In this course I got to know what a Design Pattern is, why were they created and why are they used. I learned the main Design Principles which every developer and Design Pattern tries to follow, these principles are:

1. Programming To An Interface
2. Composition Over Inheritance
3. Delegation
4. Single Responsibility
5. Open Closed
6. Liskov Substitution
7. Interface Segregation
8. Dependency Inversion
9. Dependency Injection

After the main principles I learned the 3 types of patterns - Creational, Structural and Behavioural.

The Creational patterns I now know are: Factory Method, Abstract Factory Method, Singleton, Builder and Prototype.

The Structural patterns I now know are: Adapter, Bridge, Composite, Decorator, Facade, Flyweight and Proxy.

The Behavioural patterns I now know are: Chain of Responsibility, Command, Interpreter, Iterator, Mediator, Memento, Observer, State, Strategy, Template Method and Visitor.

Topics: Design Patterns, OOP, SOLID Principles, Software Architecture

OAuth 2.0, **Udemy · Aaron Parecki** **Aug 2025 - Sept 2025**

In this course I learned the basics of OAuth 2.0 and OpenID Connect. How to implement an OAuth client from scratch. Best practices for developing OAuth 2.0 implementation to protect APIs. What JWT and Opaque tokens are, the different types of authorization flows for granting access and the different types of clients and communication channels involved in the process.

Topics: OAuth 2.0, Authorization Types, OpenID Connect, API Security, JWT, Opaque Tokens

API and Web Services Overview, **Udemy · Nate Ross** **Jun 2025 - Jul 2025**

In this high-level overview course I solidified the things I had already learned from my experience doing integrations. The course included Introduction to APIs and RESTful Web Services , What XML JSON, WSDL are, The difference between REST and SOAP, The many types of apps(Native Web Hybrid).

Topics: OAuth 2.0, REST, SOAP, API Security, JSON, XML, WSDL

JavaScript Applications, **Software University** **Oct 2024 - Dec 2024**

Credentials - https://softuni.bg/certificates/details/231977/ee5de1de
In this course we went over HTTP and REST Services, Async programming, Remote Data and Authentication, SPA, Routing Client Side Rendering..

Topics: SPA, API Security, REST, HTTP, Client Side Rendering, Routing

JavaScript Advanced, **Software University** **Sept 2024 - Oct 2024**

Credentials - https://softuni.bg/certificates/details/227996/e370868d
In this course we went over the topics - Prototypes, Inheritance, DOM manipulations and Events, Objects and Composition, Classes in JS, Error handling.

Topics: Prototypes, Inheritance, DOM Manipulation, Events, Objects and Composition, Classes in JS, Error Handling

JavaScript Fundamentals, **Software University** May 2023 - Jul 2023

In this course, I am studying JS syntax, how to use (associative) arrays and bitwise operations in JS, CSS & HTML, objects & classes in JS and working with Databases while doing a lot of exercises to prove my knowledge of the studied topics.

Topics: JS syntax, Arrays, Bitwise Operations, CSS & HTML, Objects & Classes, Databases

C++ Fundamentals, **Software University** Mar 2022 - May 2022

Credentials - https://softuni.bg/certificates/details/133157/968e759e

This course taught me the syntax of C++, what an array is and how to work with it. I learned to work with the basic data types (int, double, float, char, string), how to write functions, and use stringstream. The STL containers: vector & list were exhaustively explained, including when to use them and how to go through them using iterators.

Topics: C++ Syntax, Pointers, Memory Management, STL, Object-Oriented Programming

C++ Advanced, **Software University** May 2022 - Jun 2022

Credentials - https://softuni.bg/certificates/details/135482/59c9a899

In this course, we were taught to work with the following containers: Stack, deque, map, set, queue, and Multidimensional Arrays. We were taught Pointers on how, why and when to use them.

Topics: Stack, Deque, Map, Set, Queue, Multidimensional Arrays, Pointers

C++ OOP, **Software University** Jun 2022 - Sept 2022

Credentials - https://softuni.bg/certificates/details/142358/80ca5349

In this course, we learned about Classes and everything included in them (constructor, copy constructor, destructor, get methods, set methods, operator overloading for classes, polymorphism, inheritance, and abstract classes). The next step was getting to know Templates, enums, and bitwise operators.

Topics: Classes, Constructors, Copy Constructors, Destructors, Getters & Setters, Operator Overloading, Polymorphism, Inheritance, Abstract Classes, Templates, Enums, Bitwise Operators

MS SQL, **Software University** Jan 2023 - Feb 2023

Credentials - https://softuni.bg/certificates/details/157706/759199dc

We learned to work with one of the most used DBMS (Microsoft SQL Server). The course pays serious attention to the SQL language (CRUD operations, Selections, Table Relations, Joins, Grouping, Procedures, Triggers, Custom Functions writing, Views, Built in Functions, Transactions, and Data Aggregation). It gave us a good basic working knowledge about Data Bases.

Topics: SQL, CRUD Operations, Selections, Table Relations, Joins, Grouping, Procedures, Triggers, Custom Functions, Views, Built-in Functions, Transactions, Data Aggregation

EDUCATION

Bachelor Informatics, **Veliko Tarnovo university "St. st. Cyril and Methodius", Veliko Tarnovo** Sept 2022 — Present

Tags: Informatics, University

Software courses, **Software University, Sofia** Jan 2022 — Dec 2024

I went through courses learning programming with C++, JavaScript and Database management and creation with MySQL

Tags: C++, JavaScript, MySQL

Secondary Education, **SE "Saint Kliment Ohridski" Troyan** **Sept 2016 - Jul 2021**

I graduated with qualification "English and Mathematics"

Tags: Childhood, Home Town, Secondary Education

INTERESTS

Programming, Gym/Fitness, Basketball, Investing, Cars
